EASY COMPUTERS — Revival Plan v1

Prepared 18 Aug 2026 · Working doc for Marko · Execution partner: Claude Opus (Claude Code / chat)

0. Ground rules (locked constraints)

- **Do not touch the 3 existing accounts.** They are life support. Only acceptable use: warm intros they volunteer or that dad requests casually („znaš li nekog kome treba IT čovek?“).
- **Budget ≈ 0.** Everything below runs on the firm's existing VPS + free tiers (GitHub, Telegram) + Marko's time.
- **Positioning:** One partner for SME IT — *oprema + licence + podrška* — not a webshop competing with Gigatron on price.
- **Website role:** Trust asset + lead capture. `/shop` is a curated showcase (upit → ponuda), **not** a full e-commerce catalog. No cart, no online payment in v1.
- **Domains:** `easy.rs` primary, `izi.rs` → 301 redirect.

1. Service catalog for Serbian SMEs (what to sell)

Target client: 5–30 employees, no internal IT, Belgrade + remote-friendly. Ranked by fit with Easy's existing strengths (hardware supply + trust).

#	Usluga	Why it sells now
1	**Paušalno IT održavanje** (mesečni ugovor: remote + on-site podrška, updates, AV nadzor)	Recurring revenue; the market standard offer; clients get predictable cost instead of a ~90–100k RSD/mes IT salary
2	**Nabavka i lifecycle opreme** (laptopovi, desktopovi, monitori, periferija, garancije, zamene)	Easy's core competence; attaches automatically to every retainer
3	**Windows 11 migracija + hardware refresh**	⏰ Win10 security updates end **13 Oct 2026** (ESU Year 1 cutoff, ~8 weeks away). Business ESU costs $61/device/yr and doubles yearly — replacement often beats ESU. This is the #1 outreach hook right now.
4	**Microsoft 365 / licenciranje** (email na svom domenu, Office, Teams; Windows/Office licence)	Every SME needs it; sticky monthly; Easy already sells licenses
5	**Backup i zaštita podataka** (NAS + cloud backup, oporavak)	Fear-driven, high perceived value, sells hardware (NAS, diskovi)
6	**Mreže i Wi-Fi** (ruteri, svičevi, AP, kabliranje via podizvođač)	Project revenue + hardware attach; dad's contacts cover heavy installs
7	**Antivirus / endpoint zaštita** (ESET i sl., centralno upravljanje)	Cheap add-on, bundles into retainer
8	**Besplatan snimak IT stanja** („IT audit“)	Not a revenue line — the **lead magnet / wedge**. 60–90 min on-site, produces a 1-page findings doc that surfaces hardware, license and support gaps.

Deliberately **out of scope v1:** video nadzor, fiskalne kase, web development, custom software. (Subcontract or refer if asked.)

2. Placeholder pricing (validate in week 2 calls)

Market anchors found (Aug 2026): Belgrade IT firms start at **~2.000 RSD/h**; per-computer maintenance runs **4.000–6.000 RSD/računar/mes** (Data Inženjering); package models range up to **36.000+ RSD/mes sa PDV** for top tiers (TITI Računari); one budget player uses **2.500 fixed + 2.500/računar** (Čip IN); transport van BG ~24 RSD/km. Positioning: enter *slightly under* mid-market, win on responsiveness + hardware bundle.

Sve cene usluga su bez PDV-a. (Shop prices display sa PDV-om.)

Ad-hoc (bez ugovora)

Stavka	Cena
Remote intervencija	**2.500 RSD/h** (min 30 min)
Izlazak + rad na terenu (Beograd)	**3.500 RSD/h** (min 1h, izlazak uključen)
Teren van Beograda	+ 30 RSD/km
Hitno / van radnog vremena	+50%
Prepaid blok 10h	**30.000 RSD** (−15%, važi 6 meseci)

Mesečni paketi (ugovor, otkaz uz 30 dana)

	START	STANDARD	BIZNIS
Do broja računara	5	10	20 + server/NAS
Cena / mes	**15.000 RSD** (~€130)	**28.000 RSD** (~€240)	**55.000 RSD** (~€470)
Remote podrška (pon–pet 9–17)	✔	✔	✔
Odziv	isti/sledeći radni dan	do 4h	do 2h
On-site poseta	po potrebi (naplata −20%)	1× mesečno	2× mesečno
Windows/driver updates, AV nadzor	✔	✔	✔
Backup nadzor	–	✔	✔ + server/NAS
M365 administracija	–	✔	✔
Popust na opremu iz ponude	3%	5%	7%
Alternativa po računaru	—	**2.500–3.000 RSD/računar/mes** (za nestandardne veličine)	

Projekti / jednokratno

Stavka	Cena
Windows 11 migracija (backup podataka, instalacija, drajveri, prenos)	**4.000 RSD/računar**; 5+ mašina → 3.500

Provera Win11 kompatibilnosti celog voznog parka	**besplatno uz snimak stanja**
M365 implementacija (domen, mailbox-i, migracija pošte)	**2.500 RSD po korisniku** jednokratno; licence po Microsoft CSP ceni (Basic ~$6–7.2, Standard ~$12.5–12.95, Premium ~$22–26.4 po korisniku/mes)
Backup setup (NAS + cloud, bez opreme)	od **15.000 RSD**
Mreža za kancelariju do 20 ljudi (bez opreme)	od **25.000 RSD**
Snimak IT stanja (audit)	**0 RSD** (navesti „vrednost 12.000 RSD“)

Margin logic: retainers price at ~⅓ of the cheapest alternative (part-time IT salary), hardware attach adds the real upside, and the audit is free because every audit historically converts into at least a quote.

3. Go-to-market (no cold-calling the 3 accounts)

1. **Win10 deadline campaign (primary wedge, run Sep–Oct):** „13. oktobra vaši Windows 10 računari ostaju bez bezbednosnih ispravki. Besplatno proveravamo koje mašine mogu na Windows 11 i šta se isplati zameniti.“ Every audit ends with a migration quote + hardware quote.
2. **List building:** 100–200 Belgrade SMEs (računovođe, advokati, špediteri, ordinacije, mali proizvođači, agencije) via Google Maps + APR + LinkedIn. Marko scrapes; dad flags anyone he knows for a warm touch.
3. **Channels:** email (small manual waves, 15–20/day), Viber/WhatsApp for warm ones, LinkedIn for agencies. GBP profile so „IT podrška Beograd“ searches find something real.
4. **Referral ask (soft):** dad mentions the new services to friendly non-client contacts; never pitches the 3 accounts.
5. **Metric gate (day 30 after launch):** ≥ 10 audits booked or ≥ 3 quotes sent → continue; otherwise revise message/offer, not the website.

4. Website (summary — full spec in CLAUDE.md)

- **Stack:** Astro + Tailwind, static, deployed to the firm's **existing VPS** (aaPanel/nginx — the same box hosting mail.easy.rs, so DNS and dad's email stay untouched). GitHub Action auto-deploys on push. Forms via a tiny `upit.php` → Telegram (instant na telefon) **+ email na office@easy.rs** (lokalni mail server na istom VPS-u). No WordPress, no CMS, no new subscriptions.
- **Pages:** one-pager `/` (hero → trust bar → usluge → paketi/cene → Win10 banner → proces → o nama → FAQ → kontakt) + `/shop` (curated 30–60 SKUs, „Pošalji upit“ per product) + `/hvala`.
- **Language:** sr-Latn only in v1.
- **SEO targets:** „IT podrška za firme Beograd“, „održavanje računara za firme“, „prodaja računarske opreme za firme“, „prelazak na Windows 11“.
- **/shop rules:** cene sa PDV; volatile items = „cena na upit“; disclaimer „cene potvrđujemo uz ponudu“; availability = „kod dobavljača, isporuka 1–3 radna dana“; za pravna lica predračun.
- **Seeding without feeds:** the old aggregator stays dead. v1 is manual curation — 30–60 SKUs copied from dad's B2B portal exports, converted via Prompt P3, human-checked line by line (~2–3h). Every item carries a `supplier_sku` from the chosen refresh supplier.
- **v1.1 — price & availability refresher (post-launch, time-boxed 2–3 days):** one supplier's weekly XLS export → script matches by šifra against the curated products.json → updates price + availability *only* for existing items, flags SKUs missing from the feed (verovatno EOL) → commit triggers

redeploy. One supplier + one key = no matching problem; curation stays human, freshness goes automatic. This normalizer is also module #1 of any future B2B quoting engine.

5. Brand kit — AI tools & how to use them

Decision: the name stays **„Easy Computers“** — 27 years of equity; the lockup does the shortening („easy“ dominant, „computers“ small). A logo already exists on the ponuda template (navy #17334A / blue #2F9FDB), so Day 1 starts with **reuse-vs-refresh**, not from zero. Signature motif: a small **green status dot** (● „sve radi“) — honest to the subject (uptime), reusable everywhere (bullets, favicon, hover states). Palette: ink #12161C, paper #FAFAF7, steel #5B6470, signal green #17A34A, one restrained accent (cobalt #2450E6) — avoid the generic cream+terracotta and black+acid-green AI defaults. Type: **Space Grotesk** (display) + **IBM Plex Sans** (body — excellent š/đ/č/ć/ž coverage).

Job	Tool	Notes
Logo concepts	**Ideogram** (ideogram.ai)	Best free option for text-in-logo; generate 20+, shortlist 3
Vector/SVG logo	**Recraft** (recraft.ai)	Exports real SVG — critical for web/print
Auto-vectorize a raster pick	vectorizer.ai or Inkscape trace	Backup path
Full identity in a box	Looka / Brandmark	Paid one-time; only if Ideogram results disappoint
Palette	**Coolors** + **Huemint**	Lock ink/paper first, generate accents
Palette on a real UI	**Realtime Colors** (realtimecolors.com)	Sanity-check before coding
Type pairing	Fontjoy + typescale.com	Stay on Google Fonts (free, fast)
Contrast check	whocanuse.com	AA minimum on all text
Favicon set	realfavicongenerator.net	From the SVG mark
OG/social images	Figma (free) or Canva	1200×630 template with dot motif

Ready logo prompts (paste into Ideogram/Recraft):

> *minimalist wordmark logo, lowercase „easy“, geometric sans-serif, a small green circle dot integrated after the word, tech company, flat vector, white background, no gradients, no 3D*
>
> *logo for IT support company „easy“, abstract mark combining a power symbol and a checkmark, single color deep navy, flat minimal vector, lots of whitespace*

6. Step-by-step execution plan

Day 0 — Decisions & assets (Marko, 2–3h)

- ☐ Confirm open questions (section 8) with dad
- ☐ Collect remaining legal data: PIB, MB, adresa (naziv ✅ Easy Computers J2M d.o.o. · kontakt ✅ +381 63 1111727 / office@easy.rs · osnovana ✅ 1999.)
- ☐ In aaPanel Mail Server: create **office@easy.rs** mailbox if it doesn't exist (+ **web@easy.rs** as the form's sender)
- ☐ Create Telegram bot (@BotFather) → token + chat ID for the upit form

Day 1 — Brand sprint (Marko + tools, 1–3h)

- ☐ Decide: keep the existing ponuda logo (fast path — vectorize it if it's raster) or refresh
- ☐ If refreshing: run logo prompts, shortlist 3, pick 1, get SVG
- ☐ Lock palette + fonts (use suggested direction as default)
- ☐ Generate favicon set + OG image

Day 1–3 — Website build (Opus in Claude Code)

- ☐ New GitHub repo `easy-site`, drop `CLAUDE.md` in root
- ☐ Kick off with **Prompt P2**; review each section as it lands
- ☐ Local preview (`npm run dev`), then first deploy to the VPS via the GitHub Action

Day 2–3 — Shop data (Marko + Opus)

- ☐ Pick 30–60 SKUs from supplier lists across 8 categories (things you actually move: SSDs, RAM, monitori, laptopovi, periferija, mrežna oprema, štampači, licence)
- ☐ Use **Prompt P3** to convert supplier rows → `products.json`
- ☐ Manually sanity-check every price and name (no automated matching = no duplicate mess)

Day 3–4 — Launch (VPS)

- ☐ GitHub Action → rsync `dist/` into the easy.rs webroot (site entry stays PHP 8.1 for upit.php); DNS/mail untouched
- ☐ Create `/www/easy-config/config.php` on the server (TG token + chat ID + mail to/from, outside webroot)
- ☐ Verify izi.rs **and** www.easy.rs both 301 → https://easy.rs
- ☐ Test form → Telegram **i** email u office@easy.rs; Lighthouse ≥ 90 mobile; Cloudflare Web Analytics snippet on
- ☐ Server housekeeping: weekly aaPanel backups ON for easy.rs **i mail**; archive/disable usluge.easy.rs (backup 820 dana star, ~480k bot zahteva); strong panel password + non-default port
- ☐ Google Business Profile (Prompt P5 for texts), LinkedIn company page, new email signatures

Week 2 — Validate & load the pipeline

- ☐ 5 validation calls with friendly business owners from dad's wider circle (NOT the 3 clients): read them the paketi page, ask „šta bi vas nateralo da potpišete / šta fali / da li je cena čudna“ — adjust prices once
- ☐ Build outreach list (100+ firms) — Prompt P4 generates the templates + audit checklist
- ☐ Send wave 1 (Win10 hook), 15–20/day, track in a sheet

Week 3+ — v1.1: price & availability refresher (only after wave 1 is out)

- ☐ ✅ Supplier = **EWE** (portal XLSX verified: `Ident`, `Naziv`, `Cena sa popustom`, `Lager`, `Opis`; ~5.7k unique products). Remaining: dad confirms „Cena sa popustom“ je **bez PDV-a** + that publicly listing derived prices is OK
- ☐ Build with **Prompt P6**; hard time-box 2–3 days, then stop regardless
- ☐ Weekly loop: download XLS (2 min) → run script → review diff → commit (Action auto-redeploys)

Day 30 — Gate

- ☐ ≥ 10 audits booked or ≥ 3 quotes out → double down. Below that → fix the message/offer with Opus, resend; the site itself is done.

7. Opus prompt library (copy-paste)

P6 — /shop price refresher (Claude Code, post-launch, v1.1)

```
Build scripts/refresh-prices.py. Input: the EWE portal XLSX dropped into
/pricefeeds/ (sheet "ewe"; columns: Ident = supplier_sku, Naziv, "Cena sa popustom"
=
partner price bez PDV in format "36.960,00 RSD" — strip suffix, dot = thousands,
comma = decimal; Lager = integer stock). The same Ident appears on multiple rows
(one per category) — group by Ident, keep first; price/stock match across
duplicates.
For every product in src/data/products.json
that has a supplier_sku and auto_price=true:
  new price_rsd = supplier cena × (1 + margin from a per-category MARGINS map I'll
  fill in) × 1.20 PDV, rounded to nearest 90/990;
  availability: lager > 0 → "Na stanju kod dobavljača — isporuka 1–3 radna dana",
  else → "Trenutno nedostupno" and featured=false.
Then print a diff table: old→new price per item, availability changes, and SKUs
present in products.json but missing from the feed (flag as "verovatno EOL —
proveri").
Hard rules: read the šifra column as text (dtype=str — leading zeros must survive);
never add new products, never modify name/short_desc/specs, never touch
auto_price=false items, and exit nonzero without writing if >30% of prices changed
(that's a broken file, not a market move). Write changes only after I confirm.
```

P1 — Brand brief refinement (chat, optional)

```
Context: reviving "Easy Computers" (easy.rs), a Belgrade family business selling IT
equipment, now adding SME IT support services. Audience: owners of 5–30 person
Serbian firms, non-technical, value reliability over flash.
Task: critique this brand direction [paste section 5 direction + my shortlisted
logos as images]. Score each logo on: distinctiveness, scalability at 16px,
Serbian B2B credibility. Recommend one and give exact hex/font tokens for the site.
```

P2 — Website build kickoff (Claude Code, repo root contains CLAUDE.md)

```
Read CLAUDE.md fully before writing any code. Build the site exactly per that spec.
Work in this order: (1) scaffold + design tokens, (2) index page section by section
with the provided Serbian copy, (3) /shop from products.json, (4) upit form + PHP
endpoint + deploy workflow, (5) SEO/meta/sitemap, (6) Lighthouse pass. After each
stage, stop and show me the result before continuing. If the spec is ambiguous,
ask — do not invent new sections, do not change the copy's meaning, do not add a
cart.
```

P3 — Supplier list → products.json (chat or Claude Code)

```
I'm pasting rows from a supplier price list (format varies: Excel paste / PDF
text).
Convert ONLY the rows I marked into JSON matching this schema: [paste schema from
CLAUDE.md §6]. Rules: supplier_sku = the Ident column (as text); slug = kebab-case
name; price_rsd = my selling price which is supplier price × (1 + margin I give per
category) rounded to nearest 90/990; if I write "upit" for price, set price_rsd
null
and price_note "Cena na upit". Treat šifra (supplier_sku) as text — leading zeros
must survive. Do not merge or dedupe rows — I curate manually. Output valid JSON
only.
```

P4 — Outreach kit (chat)

```
Context: [paste plan sections 1–3]. Generate in Serbian (sr-Latn), poslovni ali
ljudski ton, no corporate filler:
1) Cold email, Win10 hook, <120 words, subject + 2 varijante prvog pasusa
2) Viber/WhatsApp poruka, <60 words, za polu-tople kontakte
3) LinkedIn poruka za vlasnike agencija, <80 words
4) Follow-up email posle 5 dana, <60 words
5) "Snimak IT stanja" checklist — 1 strana, 12–15 stavki koje proveravamo
   (računari/Win11 spremnost, backup, licence, mreža, mail, bezbednost), sa poljem
   za nalaz i preporuku — formatiran kao markdown koji mogu da odštampam.
```

P5 — GBP + SEO texts (chat)

```
Write in Serbian: (1) Google Business Profile description, 720 chars, category
"IT support and services", Beograd, mentioning oprema + održavanje + Windows 11;
(2) meta title + description for / and /shop within Google pixel limits;
(3) 5 GBP posts I can schedule (Win10 rok, besplatan snimak, paketi, oprema,
backup).
No superlatives without substance, no keyword stuffing.
```

8. Open questions — status (updated 18 Aug)

- ✅ Legal: **Easy Computers J2M d.o.o.** (site displays „Easy Computers“). Still needed for footer: PIB, MB, adresa.
- ✅ Founded **1999** → trust bar „Od 1999. godine“; sold-units counter dropped (unknown number = don't claim it).
- ✅ Name: **Easy Computers** stays; lockup emphasizes „easy“.
- ✅ Contact: **+381 63 1111727 · office@easy.rs**. Confirm: ko se javlja na upite radnim danom?
- ✅ Photos: none at launch — typographic v1; shoot 5 phone photos (radnja, magacin, radni sto) for v1.1.
- ✅ Supplier prices: **EWE B2B portal XLSX export** (verified sample: 6.720 rows / 5.726 unique Ident-a — duplicates are category re-listings, solved by group-by). Remaining check with dad: „Cena sa popustom“ je bez PDV-a? + terms allow publicly listing derived prices.
